                                                                                                                                                                                                                                                                                                            The invention relates to a novel process for preparing recombinant human parathyroxin 1-34 peptide, including such steps as culturing a host cell in proper conditions, separating Gly-Ser-Pro-PTH 1-34 peptide (ADM14376), severing by Pro endopeptidase to form PTH 1-34 peptide (ADM14378) and separating and purifying PTH 1-34 peptide. The present sequence encodes the PTH 1-34 peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present DNA sequence encodes a peptide which may be used in the construction of a tandem polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 102 BP; 30
                                                                                                                                                                                                                                                                     Sequence 102 BP; 30 A; 24 C;

The cassette comprises an operably linked nucleic acid sequence, where the expression of the cassette produces a tandem polypeptide that forms an inclusion body when expressed in a cell. The expression cassette is useful for producing peptide and polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The producing peptide and inclusion body when expressed in a cell. The present sequence is that of a DNA sequence which encodes a polypeptide which may be produced using the expression cassette of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New expression cassette comprising an operably linked nucleic acid sequence, useful for producing a tandem polypeptide that forms an inclusion body when expressed in a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Unidentified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel expression cassette-related polypeptide-encoding DNA

The expression cassette of the invention is useful for producing a peptide or polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present DNA sequence encodes a peptide which may be used in the construction of a tandem polypeptide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Production of reorganized human parathyroid hormone 1-34
                                                                    New expression cassette comprising an operably linked nucleic sequence, useful for producing a tandem polypeptide that forms inclusion body when expressed in a cell.
                                                                                                                                                                                                                                                                                                                                                                                                               11-MAR-2004
This invention relates to a novel expression cassette and methods for high yield production of polypeptides. The cassette comprises an operably linked nucleic acid sequence, where the expression of the cassette
                                                                                                                                                                                                                                                                                                                                                     expression cassette; high yield polypeptide production; tandem polypeptide; inclusion body; gene; ds; PTH.
                                                                                                                                                                                                                                                                                                                                                                                      Novel expression cassette-related

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      produces a tandem polypeptide that forms an inclusion body when expressed in a cell. The expression cassette is useful for producing peptide and polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present sequence is that of a DNA sequence which encodes a PTH peptide which was used in the exemplification of the invention.
                                      A portion (AAT34865) of plasmid pBN1:PTH(1-34)C-1c comprises DNA coding for a fusion protein (AAR87867) composed of the C-terminal end of human carbonic anhydrase II joined by an intraconnecting peptide (including a thrombin cleavage site) to amino acids 1-34 of PTH (AAR88966), followed by a Cys residue and C-terminal sequence. The complete construct can be expressed in E. coli transformants. The intraconnecting peptide and C-terminal Cys residue enable the recombinant protein construct to be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PTH; parathyroid hormone; parathormone; C-amide; C-amidated peptide; alpha-carboxamide; recombinant protein; fusion protein; transpeptidation; vector; plasmid pBN1; carbonic anhydrase II; ss.

Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions."

                                                                                                                                                                                                                                                                                                                                         TTTTT-3'], double-stranded cDNA was size selected, ligated to Eco RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pT7T3 vector (Pharmacia). Library went through one round of normalization to a Cct = 5. Library constructed by Bento Soares and M.Fatima Bonaldo. RNA from sporadic parathyroid adenomas was kindly provided by Dr. Stephen Marx, National Institute of Diabetes and Digestive and Kidney Diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GI:1319302

Site_2: Eco RI; lst strand cDNA was primed with a Not I -
Oligo(dr) primer
[5:-TGTTT-3'], double-stranded cDNA was size selected, ligated
to Eco RI adapters (Pharmacia), digested with Not I and
cloned into the Not I and Eco RI sites of a modified pT7T3
vector (Pharmacia). Library went through one round of
normalization to a Cot = 5. Library constructed by Bento
Soares and M.Fatima Bonaldo. RNA from sporadic parathyroid
adenomas was kindly provided by Dr. Stephen Marx, National
Institute of Diabetes and Digestive and Kidney Diseases,
NIH."

SEQUENCE 3, Application US/09007466

Patent No. 6313092

GENERAL INFORMATION:
APPLICANT: HOLLADAY, LESLIE A.
APPLICANT: OLDENBURG, KEVIN R.
TITLE OF INVENTION: ELECTROTRANSPORT FLUX OF POLYPEPTIDES
TITLE OF INVENTION: ELECTROTRANSPORT FLUX OF POLYPEPTIDES
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
ADDRESSEE: ALZA CORPORATION
STREET: 950 PAGE MILL ROAD
CITY: PALO ALTO
STATE: CALIFORNIA
COUNTRY: USA
ZIP: 94301-0802
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Version #1.30

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 14,

Compounds of the structure or formula S-(L) n-B, R 1-S-(L) n-R or S-(L) n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor enquals sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases and disorders associated with decreased tether1 activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by

S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-L0 (preferably 4)); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-PP) (1-34); R. its the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases
inhalation unlike the large native PTH or PTHrP which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New compound comprising an amino terminal signaling functional domain linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammalian conditions characterized by decreases in bone mass.
                                                                                                     Gaps

S is an amino terminal signaling functional domain of parachyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-PP) (1-34); R.1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor
and disorders associated with decreased tetherl activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or inn-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large native PTH or PTHrp which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New compound comprising an amino terminal signaling functional domain linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammalian conditions characterized by decreases in bone mass.
                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                        PTH; parathyroid hormone; conjugate; bone mass; bone reformation; resorption; remodeling; tether1; osteoporosis.

sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone recorption and/or bone remodeling, treating diseases and disorders associated with decreased tetherl activity, increasing of in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (laimed). The new compound can be administered by inhalation unlike the large native PTH or PTHrP which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This peptide is an example of a highly generic formula covering parathyroid hormone variants useful for treating or preventing bone conditions associated with calcium depletion/resorption, in cases where calcium fixation is required (esp. osteoporosis) or to treat

Producing antibodies to a three-dimensional epitope of a bioactive human parathyroid hormone for diagnosing or treating e.g., hyperparathyroidism by immunizing an animal with the hormone and recovering the antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a method for producing antibodies to a three-dimensional epitope of bioactive human parathyroid hormone (hPTH). The method comprises immunising an animal with the bioactive hPTH and recovering antibodies from the animal. The antibodies specifically recognise the three-dimensional structure of the bioactive hPTH. The method is useful for manufacturing a medicament for diagnosing or treating hyperparathyroidism or hypoparathyroidism. ABG76344-ABG76370 represent mutants or "variants" of peptide sequences from hPTH

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a method of producing an antibody to the N-terminal portrion of (1-84) parathyroid hormone (PTH) which comprises administering N-terminal peptide antigens corresponding to amino acid residues 2-12, 1-12, 2-15 and 1-15 of PTH. The methods and compositions of the invention are useful in determining bioactive intact PTH levels in serum, plasma and/or cell culture media and antibodies possessing a high degree of species cross-reactivity. The present esquence is a parathyroid hormone (PTH) (1-12) antigenic N-terminal peptide. This N-terminal peptide sequence is obtained from mouse and rat species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Producing antibodies to the N-terminal portion of (1-84) parathyroid hormone (PTH) by administering a first peptide antigen to a host animal, useful in determining bioactive intact PTH levels in serum, plasma and/or cell culture media.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                    Parathyroid hormone (PTH) (1-12) antigenic peptide, SEQ ID NO: 5.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of parathyroid hormone derivatives based on the rat and human hormone sequences. These peptides can be used in the treatment of human skeletal conditions, including osteoporosis, fractures and cartilage disorders, disruption of calcium homeostasis, which may cause severe bone disease, anaemia, renal impairment, ulcers, myopathy and neuropathy, hypercalcaemia and hyperparathyroidism. The present peptide was used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Osteopathic; calcium homeostasis regulator; parathyroid hormome; PTH;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gapa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Treating mammalian conditions characterized by a decrease in bone mass e.g. old age or post-menopausal osteoporosis by administering to a subject a biologically active peptide or its analogs, fragments, salts or N- or C- derivatives.
                                                                                                                                                                                                                                                                                                                                                      The present invention relates to parathyroid hormome (PTH) polypeptide derivatives, and the present sequence is one such derivative. PTH is a major regulator of calcium homeostasis. The PTH polypeptide derivatives are useful for treating conditions characterised by decreases in bone mass, such as old age esteoporosis and post-menopausal osteoporosis. The polypeptides are also useful for determining rates of bone reformation, bone resorption and/or bone remodaling, by administering the polypeptide and effective bone mass-increasing amount to the peptide into the bone, by providing to the patient DNA encoding the peptide and expressing the peptide in vivo. The levels of GAMP and inositol phosphate can also be increased in a mammalian cell having PTH-1 receptors, by contacting the cell with a sufficient amount of the polypeptide.
                                                                                                   New Parathyroid hormone (PTH) derivatives useful for treating conditions characterized by decreases in bone mass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel biologically active peptide (conformationally constrained parathyroid hormone analogues and derivatives of those homologues). The invention may be useful for the development of compounds with an endocrine-Gen, antithyroid, cardiovascular-Gen, CNS-Gen, gastrointestinal-Gen or osteopathic activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           biologically active peptide, parathyroid hormone analogue; endocrine-Gen; antithyroid; cardiovascular-Gen; CNS-Gen; gastrointestinal-Gen; osteopathic; cAMP agonist; bone calcification promoter; parathyroid hormone-1 receptor agonist; calcium antagonist; bone mass; bone reformation; bone resorption; bone resorption; bone recoporasis; osteopenia; bone fracture; cartilage disorder; OTH-1 receptor; human.
The specification describes a method for treating mammalian conditions characterized by a decrease in bone mass. The method comprises administering to a subject a biologically active peptide of a formula given in the specification. The peptide is a parathyroid hormone (PTH) derivative containing amino acid substitutions at selected positions in the polypeptide as well as derivatives containing lactam bridges between receiptor. The method is useful in treating mammalian conditions characterized by a decrease in bone mass e.g. old age or post-menopausal osteoporosis. The present sequence represents a native rat PTH fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New conformationally constrained parathyroid hormone analogs and derivatives of those homologs, useful for raising cAMP levels in cells and treating conditions such as hyperparathyroidism and hypercalcemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of the parathyroid hormone (PTH or parathormone) receptor. These antagonists contain amino acid substitutions at selected positions in truncated PTH and PTH-related polypeptide and function by selections in binding the J domain of the receptor. The J domain is the region of the receptor (PIR) that spans the seven transmembrane domain and the used to treat conditions relating to PH/PIR hyperactivity, such as hypercalcemia including malignant hypercalcemia (claimed), primary hypercalculus, profiss, a chondrodysplasia, They can also be used to identify other ligands (e.g. using a high-throughput screen) that bind to PIR, such as small molecule PTH mimetic compounds, or for the
acting as a cAMP agonist, bone calcification promoter, agonist of parathyroid hormone-1 receptor or calcium antagonist. The invention may be useful for treating mammalian conditions associated with decrease in bone mass or for determining rates of bone reformation, bone resorption and/or bone remodeling. The invention may also be useful for prophylaxis and/or bone reacogling. The invention may also be useful for prophylaxis cxample osteoporosis, osteopenia, fractures and cartilage disorders, and for treating a medical disorder that results from altered or excessive action of the OTH-1 receptor. The present sequence is that of a human parathyroid hormone-derived biologically active peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           invention provides novel antagonists of the juxtaposition (J) domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             pharmacological analysis of PIR ligands for their selectivity, e.g. for

The methods and compositions of the invention are useful in determining bioactive intact PTH levels in serum, plasma and/or cell culture media and antibodies possessing a high degree of species cross-reactivity. The present sequence is a parathyroid hormone (PTH) (1-15) antigenic N-terminal peptide. This N-terminal peptide sequence is obtained from mouse and rat species.
                                                                                                                                                         ö
the J domain. The present sequence is that of rat PTH(1-14). PTH derivatives of the invention contain changes in sequence relative to this wide-type sequence. Note: this sequence is given as SEQ ID NO:26 in Figure 1 of the specification, but is different from the sequence given in SEQ ID NO:26 on page 16 ADW88342.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Producing antibodies to the N-terminal portion of (1-84) parathyroid hormone (PTH) by administering a first peptide antigen to a host animal, useful in determining bioactive intact PTH levels in serum, plasma and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The invention provides novel antagonists of the juxtaposition (J) domain of the parathyroid hormone (PTH or parathormone) receptor. These antagonists contain amino acid substitutions at selected positions in truncated PTH and PTH-related polypeptide and function by selectively truncated PTH and PTH-related polypeptide and function by selectively binding the J domain of the receptor. The J domain is the region of the receptor (PIR) that spans the seven transmembrane domain and the extracellular loops. PIR polypeptide antagonists of the invention can be extracellular loops. PIR polypeptide antagonists of the invention can be considered to treat conditions relating to PHPIR hyperactivity, auch as the present and Jansen's chondrodysplasia. They can also be used to identify other ligands (e.g. using a high-throughput screen) that bind to identify other ligands (e.g. using a high-throughput screen) that bind to PIR, such as small molecule PTH mimetic compounds, or for the copies of the invention contain changes in sequence relative to this derivatives of the invention contain changes in sequence relative to this will be the specification, but is significant of the sequence given in SEQ ID NO:27 in Pigure 1 ADW88337.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Parathyroid hormone peptide; PTH; renal cell; osseous cell; human; signal transduction; osteoporosis; amino-terminal modification; bone disease; parathyroid hormone receptor; osteopannia; hypoparathyroidism; fracture repair; hypercalcaemia; cancer; osteopathic.
Cardiovascular-gen.; CNS-gen.; gastrointestinal-gen.; endocrine-gen.; antithyroid; parathormone; hypercalcemia; metabolic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New conformationally constrained parathyroid hormone analogs useful the treatment of e.g. hypercalcemia primary and hyperparathyroidism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human amino-terminal modified parathyroid hormone analogue # 7.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                      Parathyroid hormone (PTH) binds to PTH receptors in renal and osseous cells, initiating signal transduction. It has been identified that the carboxyl terminal of PTH is important for PTH receptor binding, while the amino terminal is important for signal transduction. The present sequence is a human PTH peptide, with an amino-terminal modification which results in effective activation of the PTH-2 receptor and therefore downstream signalling. Aberrant PTH activity has been implicated in a number of disorders: osteoporosis, osteopomia, hypoparathyroidism and hypernalcaenia. In turn, hypercalcaemia is associated with hypernephroma conditions and evariety of cancers: breast, lung and prostate carcinoma, multiple myeloma and epidermoid cancers of the head, neck and oesophagus. This peptide would be suitable for prophylaxis and treatment of the above fracture repair. The present sequence would be suitable for fracture repair. The present sequence is modified to have a desamino constitution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .;

Parathyroid hormone (PTH) binds to PTH receptors in renal and osseous cells, initiating signal transduction. It has been identified that the carboxyl terminal of PTH is important for PTH receptor binding, while the amino terminal is important for signal transduction. Various PTH peptides were produces with amino- and carboxy terminal modifications PTH peptides varying PTH receptor activation properties and therefore downstream signalling. Aberrant PTH activity has been implicated in a number of disorders: osteoporosis, osteopaenia, hypoparathyroidism and hypernephroma and a variety of cancers: breast, lung and prostate carcinoma, multiple myeloma and epidermoid cancers of the head, neck and oseophagus. The present sequence is a PTH peptide, with an Ala residue at position 19. The Ala residue improves downstream signalling and ligand binding. PTH peptides with an Arg residue at calcues ptc signalling and ligand binding. PTH peptides with an Arg residue at position 19. The Ala residue improves downstream signalling and ligand binding. PTH peptides with an Arg residue at position pthy are improved PLC signalling and ligand binding. PTH peptides with an Arg residue at position supposed PLC signalling and ligand binding pthy for the treatment of the above mentioned disorders and fracture repair
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                   Novel biologically active peptide comprising a parathyroid hormone peptide derivative, useful for treating osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; parathyroid hormone; signal transduction; osteoporosis; osteopaenia; hypoparathyroidism; fracture repair; hypercalcaemia; breast cancer; lung cancer; prostate cancer; multiple myeloma; hypernephroma; head and neck epidermoid cancer; oesophagus cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

calls, initiating signal transduction. It has been identified that the carboxyl terminal of PTH is important for PTH receptor binding, while the amino terminal of PTH is important for PTH receptor binding, while the amino terminal is important for gignal transduction. Various PTH peptides were produces with amino- and carboxy terminal modifications which had varying PTH receptor activation properties and therefore downstream signalling. Aberrant PTH activity has been implicated in a number of disorders: osteoporosis, osteopaenia, hypoparathyroidism and mucher of disorders. In turn, hypercalcaemia is associated with hypernephroma and avariety of cancers: Dreast, lung and prostate carcinoma, multiple myelome and epidermoid cancers of the head, neck and oesophagus. The present sequence is a PTH peptide, with an Ala residue at position 19. The Ala and Arg residues both improve downstream signalling via phospholipase C (PLC) and ligand binding. The treatment of the above mentioned disorders. In addition, the present repetions would be suitable for fracture repair
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel biologically active peptide comprising a parathyroid hormone peptide derivative, useful for treating osteoporosis.
                                                                   Novel biologically active peptide comprising a parathyroid hormone peptide derivative, useful for treating osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; parathyroid hormone; signal transduction; osteoporosis; osteoporopaenia; hypoparathyroidism; fracture repair; hyporacalcaemia; breast cancer; lung cancer; prostate cancer; multiple myeloma; hypernephroma; head and neck epidermoid cancer; oesophagus cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bringhurst FR, Takasu H, Gardella TJ, Potts JT;

cells, initiating signal transduction. It has been identified that the carboxyl terminal of PTH is important for PTH receptor binding, while the carboxyl terminal of PTH is important for PTH receptor binding, while the anino terminal is important for signal transduction. Various PTH peptides over produces with anino- and carboxy terminal modifications which had varying PTH receptor activation properties and therefore downstream signalling. Aberrant PTH activity has been implicated in a number of disorders: osteoporosis, osteopor
